-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 6-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Bohn, et al (6,257,615).

Bohn teaches an airbag module for installation in a steering wheel, the airbag module 2 comprising a gas generator carrier 7 and a covering cap 3 which are connected with each other by a snap connection as shown in figure 1. Bohn teaches the gas generator carrier having first projections 18 and the covering cap having second projections 14, each associated to one of the first projections, one of the first projections of the gas generator carrier and an associated one the second projections of the covering cap forms a common extension 4 which receives a first end of a helical spring 12. The extensions are provided on an underside of the airbag module, the underside opposing a region adjoining a steering wheel hub (not shown). The extensions have a diameter that is greater than an internal diameter of an associated one of the helical springs. The helical springs have a first end with which they rest against an underside of the airbag module and a second end with which they rest indirectly against the steering wheel. The extensions are formed on the steering wheel

on which the second ends of the helical springs are received. The airbag module is fastened on the steering wheel solely by the helical springs. The helical springs alone bring about a guidance of the air bag module with respect to the steering wheel. One contact surface 17 is formed on the steering wheel at a place opposing an extension of the air bag module.

Allowable Subject Matter

3. Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Notice of References Cited list references disclosing some features in common with the present invention.
